Mohd Shuja Rizvi

Process Automation Engineer at Capgemini | GCET
Malaysia

Summary

Process Automation Engineer at Capgemini, working on automation, process development, and AI integration for enterprise applications. My work spans more than just testing, I design and automate end-to-end business processes, perform API testing and validation, work with encryption and JWT-based security implementations, and integrate AI into existing workflows to reduce manual overhead. Previously worked as a Technology Lead at Torn & Stitched, where I built and managed Shopify infrastructure, handling both front-end development and backend configurations. My background is in Electrical Engineering, but my career has been deliberately technical and hands-on, moving across automation, development, and AI as the problems demanded. Currently deepening my knowledge in AI and LLM-based systems. I'm always eager to learn, explore new tools, and collaborate on innovative automation solutions that make testing smarter and faster. Let's connect and exchange ideas around test automation, continuous learning, and process excellence.

Experience

Capgemini

Process Automation Engineer (Consultant - Sancy Solutions Sdn Bhd)
August 2025 - Present (1 year 1 month)

Federal Territory of Kuala Lumpur, Malaysia

Working as a Process Automation Engineer at Capgemini, contributing to automation, process development, and AI integration for enterprise applications. My role spans both engineering and delivery designing automated workflows, validating REST APIs, and building solutions that reduce manual effort across critical business processes.

Roles & Responsibilities:

- Perform API testing for REST services, validating request/response structures, status codes, and business logic.

- Develop and maintain data-driven automated test scenarios to improve test coverage and reduce manual effort.
- Design and automate end-to-end business processes, replacing manual workflows with structured automation solutions.
- Integrate AI capabilities into existing processes to improve efficiency and decision-making.
- Collaborate with cross-functional teams to understand requirements, identify edge cases, and ensure quality delivery.
- Analyze defects, report issues with clear reproduction steps, and support root-cause analysis.

Key Contributions:

- Improved test execution efficiency by replacing repetitive manual test cases with automated workflows.
- Built and deployed process automation solutions that directly reduced operational overhead.
- Ensured stability of critical application flows through consistent regression testing.

Tech Stack:

REST APIs, Tosca, Selenium, Appium, TypeScript, Java, API Testing, Automation Testing, Process Automation, AI Integration

Torn & Stitched

Technology Lead

February 2024 - July 2025 (1 year 6 months)

Noida, Uttar Pradesh, India

I set up Shopify stores, configuring both front-end elements and Liquid templates to ensure a seamless and customized shopping experience. I conducted data analysis to extract actionable insights, enhancing the stores' performance and improving customer engagement through data-driven decisions. I also worked with Selenium for testing purposes and automated several steps to improve efficiency and accuracy. Additionally, I heavily worked in Excel to maintain and organize data, ensuring accuracy and facilitating better decision-making.

Roles and Responsibilities:

- Set up and configured Shopify stores, managing both front-end elements and Liquid templates to create a smooth and tailored shopping experience.

- Performed data analysis to identify trends and opportunities, improving store performance and customer engagement through data-driven decisions.
- Utilized Selenium to automate testing processes, enhancing efficiency and accuracy.
- Managed and maintained datasets in Excel, ensuring accuracy and facilitating better decision-making.

Relevant Transferrable Skills:

Client Interaction, Team Leadership, Adaptability, Team Management, Problem-Solving, Data Analysis, Automation, Data Management, Automation

Tech Stack:

JavaScript, Data Analysis, Shopify, Liquid, Selenium, Excel, Google Analytics, HTML, CSS

Newgen Software

1 year 2 months

Application Engineer

July 2023 - February 2024 (8 months)

Noida, Uttar Pradesh, India

I developed and implemented robust and scalable solutions for Middle East clients using Newgen products and SQL. I successfully delivered tailored solutions by utilizing a diverse technical stack and working closely with cross-functional teams.

Roles and Responsibilities:

- Developed and implemented solutions using Newgen products, Java and SQL to meet client requirements.
- Designed, developed, and deployed applications using Java, JavaScript, and SQL.
- Collaborated with cross-functional teams to integrate systems and troubleshoot performance issues.
- Optimized overall application performance to enhance user experience.

Relevant Transferrable Skills:

Client Interaction, Team Building, Adaptability, Software Development, Problem-Solving

Tech Stack:

Java, MsSQL, JSP, XML, JavaScript, Newgen Software Products, Excel

Application Engineer(T)

January 2023 - July 2023 (7 months)

Noida, Uttar Pradesh, India

I completed comprehensive training in Java and SQL provided by the company, along with specialized training on Newgen products. I gained hands-on experience in mastering the functionalities and integration points of Newgen products. I built a strong foundation in software development principles and system integration, preparing myself for real-world project execution. I also worked on projects assigned by the training team, applying the skills and knowledge gained during the training to develop effective solutions.

Relevant Transferrable Skills:

Team Building, Adaptability, Software Development, Problem-Solving, Effective Communication

Uttar Pradesh Power Corporation (Uppcl)

Trainee

July 2022 - July 2022 (1 month)

Lucknow, Uttar Pradesh, India
